SLEEPING BAGS

**PEPPERDINE
SWITZERLAND**

Marmot Sawtooth 15

The Marmot Sawtooth Sleeping Bag is a 15°F sleeping bag for backpacking in cool to cold weather. The inside has been packed with 650 fill power Down Defender insulation, which is treated to provide water resistance against condensation and poor weather conditions. Your bag stays drier so you stay warmer throughout the night. Saw some logs while snuggling in with the draft collar wrapped softly at the neck. When it's time to move on to the next camp, utilize the included stuff sack to compress the bag down into a neat little package. Upon your return home, store it in the storage sack for the next adventure.

Because of the nature of the down insulation used in this bag, it is important to keep this bag dry. Always air your bags out to dry between uses and when you return from your trips. Failure to do so may result in damage fees.

Details

- Industry leading DAC Featherlight™ NSL poles
- Direct Connection point secures tent body, frame and fly at each guy out point for a solid connection between all three components
- Large dry entry vestibules with brow pole provide ample headroom and room for gear storage
- 2 dual canopy and mesh doors
- Snow flaps on front vestibule seal out spindrift
- Guaranteed watertight construction with fully taped fly, taped 'bathtub floor' construction, welded corners and welded guy clip anchors. Rain room tested.
- Internal Tension Shelves provides strength, support for vestibule pole, and 3-D storage
- Mesh and canopy zippered thru-vent allows ventilation and view through the fly window
- SVX windows for a brighter interior and visibility of exterior conditions
- Bartacks color code webbing at stake out points for easy pole set up
- Gear can be stored off the floor using internal mesh pockets or an accessory gear loft (sold separately)
- Multiple guy out points with self-equalizing guy out anchors on side walls
- Loops for internal guy system
- Reflective color coded starter tab on the rainfly and canopy make pitching easy
- Reflective guy-out loops and zipper pulls are easy to see at night
- Pitch Light configuration allows user to set up a superlight shelter using only the tent fly, poles and footprint (sold separately)

REWORD

- Optional rectangular or triangular gear loft stows gear off the floor (sold separately)
- Optional floor footprint available
- Guy out line and line tensioners included
